

I love the addition of the instant traffic and weather channels on XM Radio. It's great when I am traveling as well as when I am staying in my own area. I don't have to wait for "traffic and weather on the 8's" or anything like that. It's a service I pay for and I should be entitled to have this wonderful service to listen to when I need it. Not only do the traffic reports give travel time information, but they also give the average speed of travel on a given section of road, which I have never heard given on any other traffic report on any other newscast! This is simply the best traffic and weather report I have ever experienced and I won't buy another new car without the benefit of XM Satellite Radio factory installed!
